

Emerson & Cuming Microwave Products is sponsoring the 'Lessius Racing Team 2012'.

The Lessius Racing Team is a group of about 25 students from different faculties of the Lessius Hogeschool Mechelen. They will participate for the third time in the Formula Student Competition.

What is Formula Student ?

Formula Student(FS) is a testing ground for the next generation of world-class engineers. It challenges university students from around the world to design and build a single-seat racing car. The final competition is not necessarily won by the fastest car, but by the team with the best overall design package. Points can be earned on technical design, innovation, fuel economy, business and sales planning, and presentation of all this.

The goal of this competition is to encourage young people to enrich their academic studies with intensive experience in design and manufacturing. As a team they have to design, build, finance, present and compete with the other teams in a series of events. It is an excellent opportunity for students to demonstrate and improve their skills.

Emerson and Cuming Microwave Products, a design and manufacturing company of custom-made microwave absorbing materials, is enthusiastic about the initiative, as it gives them the opportunity to meet future engineers, young people who have a strong drive to learn and develop new future designs and techniques.
